PULAK KANTI PRAMANIK

Full Stack Java Developer | Spring Boot · Microservices · React.js / Angular

Bangalore, India | 9480339703 | pulak.the.developer@gmail.com | LinkedIn | GitHub | LeetCode

PROFESSIONAL SUMMARY

Full Stack Java Developer with **4+ years** of experience designing secure, scalable **microservices** for healthcare and e-commerce platforms. Skilled in building production-grade **Spring Boot** REST APIs, **Spring Security/JWT** authentication, and **React.js/Angular** frontends. Proven track record delivering payment, authentication, and inventory-critical systems with strong focus on data consistency and reliability. Backed by 700+ solved **LeetCode** problems and a 600-day coding streak.

TECHNICAL SKILLS

Languages	Java 17 · JavaScript · TypeScript · SQL
Frontend	React.js · Angular · HTML5 · CSS3
Backend	Spring Boot · Spring MVC · Spring Security · Spring Data JPA · JWT · Hibernate · RESTful APIs
Architecture	Microservices · API Gateway · Apache Kafka · Resilience4j · Feign Client
Database	MySQL · Query Optimization · Indexing · Server-Side Pagination · Redis (Caching)
Cloud / DevOps	AWS (EC2, S3, RDS) · Docker · Kubernetes · Git/GitHub · Maven · SonarQube · CI/CD
Testing / Tools	JUnit 5 · Mockito · Swagger/OpenAPI · Postman · JIRA
Methodology	Agile · Scrum

PROFESSIONAL EXPERIENCE

Unizen Technologies — Software Engineer (Java Full Stack)

Nov 2022 – Present

Bangalore, India

Client: Labcorp — Enterprise Diagnostic Management System

Healthcare | Team of 6 | Spring Boot · Angular · TypeScript · MySQL · Microservices

- Architected secure **REST APIs** in **Java 17** across User, Medicine, Prescription, Order, Payment, and Audit modules using a layered Controller–Service–Repository design.
- Developed the **Angular** (TypeScript) frontend using standalone components and a modular `core / shared / features` structure, covering Login, Medicine Catalog, Product Details, Cart, Prescription Upload, Checkout, Orders, and Profile screens.
- Built an **Admin Dashboard** to manage orders, prescription approval/rejection, and payment records, with server-side **pagination, sorting, and status-based filtering** integrated with the Spring Boot APIs.
- Secured the platform with **JWT authentication** and **Spring Security**, implementing BCrypt hashing, custom auth filters, and method-level access control for USER/ADMIN roles.

- Developed the Medicine Management module with CRUD operations, validation, search, dynamic filtering, pagination, sorting, and status management.
- Eliminated lost-update conflicts on medicine inventory during concurrent orders by implementing **Optimistic Locking** (JPA `@Version`).
- Delivered the **Prescription module** (multipart upload, restricted-medicine validation, admin verification, approval workflows) and an Order module with business-driven status transitions and transactional stock management.
- Built a **payment module** with **idempotency-key**-based duplicate prevention and webhook-driven async confirmation, auto-transitioning orders from Approved to Processing.
- Designed a centralized **Audit Logging** system tracking order, payment, and prescription events with user details, timestamps, and entity references for compliance.
- Implemented **global exception handling** with standardized error responses for validation failures, resource-not-found cases, business-rule violations, and optimistic locking conflicts.
- Improved reliability with **JUnit 5/Mockito** unit tests on payment state transitions and validation logic, and streamlined integration by documenting APIs via **Swagger/OpenAPI** and validating them in Postman.
- Applied structured **SLF4J** logging without exposing sensitive data (passwords, JWT secrets, payment credentials), and managed code with Git feature-branch workflow and Maven builds.

Moglix — Electronics E-Commerce Platform

E-Commerce | Team of 8 | Spring Boot · React.js · Microservices

- Built **Spring Boot REST APIs** for product, category, user, cart, and order management, implementing core CRUD and business logic.
- Improved product discoverability by implementing search, filtering, sorting, and pagination across the catalog.
- Designed normalized **MySQL** schemas for users, products, categories, carts, and orders using Spring Data JPA.
- Developed **React.js** components for product listing, product details, cart, checkout, and order tracking, integrated end-to-end with backend APIs.
- Standardized error handling with request validation and global exception handling for consistent, predictable API responses.

PROBLEM SOLVING & ACHIEVEMENTS

700+ problems solved on LeetCode in Java — strong command of Data Structures, Algorithms, and optimized coding practices.

600-day continuous coding streak — demonstrating sustained, daily commitment to technical mastery.

EDUCATION

Bachelor of Technology (B.Tech)

Gargi Memorial Institute of Technology, Kolkata | Graduated 2022 | CGPA: 8.6
